

About this model

Model: SVM

Task: Binary sentiment classification

Features: TF-IDF on cleaned review text

How to read predictions

- **Label** → predicted sentiment
- **Confidence** → model confidence score
- Higher confidence means stronger prediction

NLP Sentiment Analysis

Binary sentiment classifier using TF-IDF and SVM model.

Single Review

Batch Mode

About the Model

Pipeline

1. Data cleaning
2. TF-IDF vectorization
3. SVM model training
4. Sentiment prediction

Why SVM?

- Works well for NLP text classification
- Handles high-dimensional TF-IDF features effectively
- Good performance for sentiment analysis
- Faster and efficient for smaller datasets

Known Limitations

- May struggle with sarcasm
- Depends on training data quality

- Confidence score is approximate
